EMPLOYEE BULLETIN

CONSERVATION MEASURES TO REDUCE GASOLINE CONSUMPTION

Tests have shown that properly inflated tires can increase vehicle fuel efficiency by as much as 5 percent. Maximum tire inflation is regarded to be a highly cost effective method of improving fuel economy! A relatively small investment of time inflating tires to the maximum tire pressure will provide a dividend through increased miles per gallon. The Motor Pool has adopted the policy of inflating tires to their maximum pressure and individuals are encouraged to adopt a similar policy with assigned vehicles and their privately owned vehicles.
